

VISION 21™ Automatic Payment Station

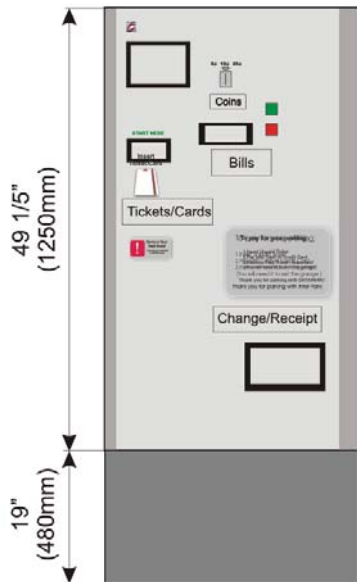

The **VISION 21™ Automatic Payment Station** is designed for automated “pay-on-foot” cashiering. Strategically located at the pedestrian portal of the parking facility, these **Automatic Payment Stations** are ergonomically designed with the parking customer in mind. Clear instructions and graphics outline the payment process. The bi-directional ticket transport retracts the entry ticket within the unit and all encoding takes place after payment is made. Multiple payment methods such as notes, coins, system debit cards, credit cards, chip cards, intelligent RFID devices and contactless reading devices can be integrated onto the system.

Multiple languages, currencies and cabinet designs are available to adapt to any environment or application.

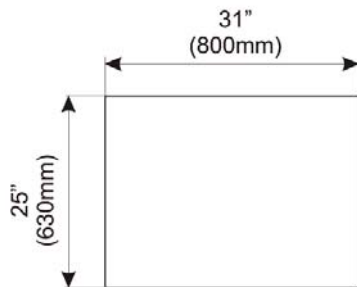

Integration of client services include, multiple access control features and read devices, express credit card usage, system debit cards, hotel interface and valet operations, network connectivity and flexible reporting requirements.
