

VISION 21™ Cashier Station

The **VISION 21™ Cashier Station** is designed for manual exit lane cashiering and central cashiering. The **Cashier Station** combines parking specific payment functions, re-coding tickets, issuing daily passes, add value to system debit cards and pay monthly fees directly to your account. The universal ticket validator reads and encodes tickets, system debit cards, and credit cards as required. Merchant validations and system financial reports are numerous and password protected. Tax structures, multiple currency, and foreign languages are all field programmable.

Integration of client services include, multiple access control features and read devices, express credit card usage, system debit cards, hotel interface and valet operations, network connectivity and flexible reporting requirements.

Subject to technical and design changes without notice — 09/04

FEATURES when incorporated with the **Vision 21™ Validator**

- On-Line System with RS232, RS485 communication
- Complete Stand-alone Operation
- 256 Access Levels
- Time Zones
- Pre-pay functions
- Monthly payment with database interface
- 99 Operators
