

VISION 21™ Electronic Ticket Validator

The **VISION 21™ Electronic Ticket Validator** is designed for off-line ticket validation by merchants or specific clients/accounts to change the value or structure of the entry transient ticket. The ticket is inserted into the validator and automatically recoded by time, percentage, flat fee or even a different rate structure. Also includes one line of print to identify the account name or store number.

The **Electronic Ticket Validator** is ideal for discounting entry tickets for shopping centers, hospitals, colleges, convention centers and hotels.

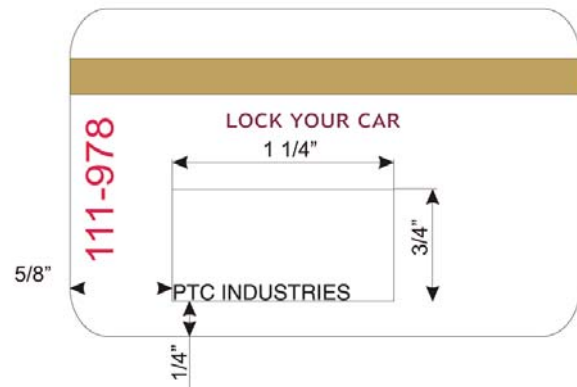

Integration of client services include, multiple access control features and read devices, express credit card usage, system debit cards, hotel interface and valet operations, network connectivity and flexible reporting requirements.

SPECIFICATIONS

- The **Vision 21™ Electronic Ticket Validator** magnetically encodes machine readable parking tickets enabling automatic discounting from any cashier, exit and pay stations.
- After reading the entry time and applying the rate, the station then applies the discount encoded on the ticket by the **Vision 21™ Electronic Ticket Validator** to determine the fee due.
- When the fee due is satisfied, the station processes the ticket for exit.
- Dimensions and Finish:
3"W x 4"L x 2"H
Plastic housing

FEATURES

- Eight magnets enabling 128 different store type combinations
- Encoded tickets are machine readable by:
 - **Vision 21™ Exit Control Station**
 - **Vision 21™ Cashier Station**
 - **Vision 21™ Automatic Payment Station**
- Custom stamp imprints
- Discounts apply by amount, percent and time
