

VISION 21™ Exit Lane Payment Station

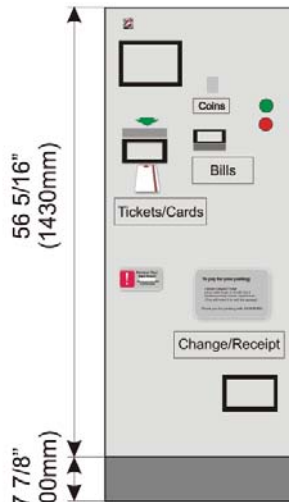

The **VISION 21™ Exit Lane Payment Station** is designed for automated “pay-in-lane” cashiering. Located at each exit lane of the parking facility, these **Exit Lane Payment Stations** are ergonomically designed with the parking customer in mind. Clear instructions and graphics outline the payment process. The bi-directional ticket transport retracts the entry ticket within the unit and all encoding takes place after payment is made. Multiple payment methods such as notes, coins, system debit cards, credit cards, chip cards, intelligent RFID devices and contactless reading devices can be integrated onto the system.

Multiple languages, currencies and cabinet designs are available to adapt to any environment or application.

Integration of client services include, multiple access control features and read devices, express credit card usage, system debit cards, hotel interface and valet operations, network connectivity and flexible reporting requirements.
