

VISION 21™ Model 300 Message Signs

The **VISION 21™ Model 300 Message Signs** were designed for high visibility in the vehicle control industry. 2" to 4" characters allow for multi-color high intensity LED components for interior or exterior data display. These signs can be used as directional signage, intelligent space available signs, customer fee displays, and some models have vehicle detection and directional logic built-in for facility or zone space counting.

Integration of client services include, multiple access control features and read devices, express credit card usage, system debit cards, hotel interface and valet operations, network connectivity and flexible reporting requirements.
