

VISION 21™ Usage Display System

Increased vehicle throughput and convenient customer management is the criteria by which a parking client experiences the quality of a parking facility. This impression is enhanced by the reliability and payment flexibility of the entire system. PTC Industries has designed their **VISION 21™ Usage Display System** based upon this perspective. The user-friendly design of the **VISION 21™** product line is characterized by the large scale, multi-lingual customer displays, clear instructions and the option of inserting tickets or cards in either direction.

Integration of client services include, multiple access control features and read devices, express credit card usage, system debit cards, hotel interface and valet operations, network connectivity and flexible programming options.
